Profile Summary

Backend Java Developer with 3.6+ years of experience building scalable, secure, and high-performance backend systems using Java, Spring Boot, and Microservices. Skilled in RESTful API design, JWT/OAuth2 authentication, multi-tenant architecture, and data processing with multithreading. Committed to writing clean, optimized code and delivering reliable enterprise solutions.

Experience

SOFTWARE DEVELOPER | WovVTech | DEC 2021 – PRESENT

- Proficient in **Java**, **Spring Boot**, **Spring Security**, and **Microservices architecture** for enterprise-grade backend services.
- Built secure authentication layers using JWT, OAuth2, and SSO integration (Google, IOS).
- Strong in **RESTful API design and integration**, with experience in handling both **JSON** and **XML** data formats.
- Expert in building multi-tenant applications, ensuring data isolation, custom configurations, and secure tenant-level access.
- Implemented robust system security mechanisms including SQL injection protection, rate limiting, IP blocking, and DDoS defense.
- Developed **OCR-based automation** tools for **auto-filling invoice/billing data**, improving operational efficiency.
- Designed multi-threaded data ingestion pipelines, achieving efficient processing of large-scale raw data.
- Built intelligent **file processing systems** for parsing `.doc`, `.xlsx`, `.xml`, `.txt` files using **Apache POI** and **OpenCSV**.
- Created and maintained **log and audit architectures** using the **ELK stack** for monitoring and traceability.
- Experience with Redis, and CDN services for secure storage, fast delivery, and caching strategies.
- Passionate about performance optimization, clean code practices, and maintainable software architecture.

Projects:

OKEN

Tech Stack: Java, Spring Boot, Spring Security, Microservices, REST APIs, OAuth2, JWT, MySQL, Redis, Elasticsearch, Apache Kafka, Multi-Tenant Architecture
Role: Backend Java Developer
Key Contributions:

- Developed a secure **authentication and authorization layer** using **JWT** and **OAuth2**, including **third-party SSO integration** (Google, Microsoft).
- Implemented system-level **security protocols**: **SQL injection prevention**, **IP rate limiting**, **DDoS protection**, and **automated IP blocking**.
- Created scalable **logging architecture** using ELK stack for auditing and monitoring user activities.
- Integrated external APIs to **convert raw input (JSON/XML)** into structured formats using **Jackson** and **custom parsers**.
- Performed **code refactoring and optimization**, reducing memory usage and improving service response time by 30%.
- Built **OCR-based bill scanning and autofill feature** to extract invoice data using Tesseract OCR.
- Engineered **coupon unlock logic** and applied validation rules on backend for dynamic feature management.
- Designed and implemented **multi-tenant support** in Spring Boot for onboarding multiple clients securely.
- Modularized application into **Spring Boot microservices** for authentication, logging, coupon management, and billing workflows.

CDN

Tech Stack: Java, Spring Boot, REST APIs, AWS S3, Rate Limiting
Role: Backend Java Developer
Key Contributions:

- Developed a secure **file upload/download system** with **token-based access control** and **rate-limiting mechanism** using Bucket4j.
- Implemented **dynamic path handling** and **secure file deletion functionality** ensuring integrity and traceability.
- Ensured **scalable file storage** using AWS S3 and custom metadata mapping logic.

Wovmail Automation System

Tech Stack: Java, Spring Boot, Microsoft Graph API, JavaMail, Multi-Tenant
Role: Backend Java Developer
Key Contributions:

- Automated the **extraction of attachments** from Outlook emails based on subject patterns using Microsoft Graph API.
- Parsed and processed files for **multi-tenant environments**, uploading them to specific client spaces with metadata tagging.

API Integration Platform

Tech Stack: Java, Spring Boot, REST APIs, XML/JSON Parsing, Apache POI, OpenCSV, Scheduler
Role: Backend Java Developer
Key Contributions:

- Integrated with multiple client-side APIs to **fetch and parse data** in **XML/JSON** formats.
- Created dynamic parsers for documents (.doc, .xml, .xlsx, .txt), extracting relevant data and **uploading to the backend server**.
- Scheduled batch jobs for periodic data sync using Spring Scheduler and Quartz.

WovVRA (Raw Analysis)

Tech Stack: Java, Spring Boot, Multi-threading, JDBC, MySQL
Role: Backend Java Developer
Key Contributions:

- Designed and implemented a data processing pipeline to **clean, de-duplicate, and map records** to DB schema.
- Leveraged **multi-threading and concurrent processing** to insert high-volume data efficiently into relational databases.
- Applied data validation and transformation logic for consistent ingestion.

KEY SKILLS & TECHNOLOGIES

- **Languages:** Java, SQL
- **Frameworks:** Spring Boot, Spring Security, Spring Data JPA
- **Architecture:** Microservices, RESTful APIs, Multi-Tenant Architecture
- **Security:** OAuth2, JWT, IP Blocking, Rate Limiting, XSS/SQLi Protection
- **Data Processing:** Apache POI, OpenCSV, OCR (Tesseract), JSON/XML Parsing
- **Dev Tools:** Git, Maven, Postman
- **Databases:** MySQL, MongoDB, Redis
- **Cloud & Storage:** CDN Integration
- **Others:** Multi-threading, ELK Stack, Scheduler, API Integration

Education

BACHELOR OF ENGINEERING | JUNE 2019 | MUMBAI UNIVERSITY
